

TideMinders®

from: *Go With the Flow Solutions, LLC*

NEW & IMPROVED!

April 7, 2006

**AVAILABLE IN
4 COLORS!**

The latest system for control of boats and their dock/mooring lines in tidal/surging waters:

PROTECTS

- Your Boat
- Your Lines
- Your Dock
(up to 1" diameter)

ELIMINATES

- Line Fouling & Snagging
- Chafing
- Frequent Adjustments

PROVIDES

- Constant Tension & Shock Absorption
- Steady Up & Down Movement with Boat
- Long-term Security When Away from Boat

TideMinders®

from Go With the Flow Solutions, LLC

Testimonials & Comments Heard at our Seminars

We added **TideMinders** to the stern lines on our C&C 32, used daily in our sailing school at Torresen Marine. We don't have tides, but our open docks are exposed to rough water during storms and on windy days. The **TideMinders** have really done their job, keeping steady tension on the stern lines as they adjust to surges and waves. After a full season of use, there was no sign of chafing – the lines were as good as new. **TideMinders** should be especially useful on boats that are unattended for days or weeks at a time.

Brian Torresen, Service Mgr., Torresen Marine, Muskegon, MI

My Morgan Out Island 33 is tied off the stern to pilings with two sets of **TideMinders**. We have had extreme tides and stormy winds from different directions and performance has been excellent in all conditions. We have none of the problems or frequent adjustments that the other boats require. I feel more confident with this system than any method I have used to secure a boat.

Alan McAllister, Hernando Beach, FL

For me, the best thing about **TideMinders** is that they hold our old Hatteras 44 securely, but gently, with very little sideways or fore and aft movement. And I like their shock absorbing effect so I don't really need snubbers or spring lines. If the weather gets rough I still use spring lines, but only to share the load on the boat's deck cleats. I'm convinced that the last thing to fail would be the **TideMinders**.

Dr. Brian Parkhurst, Holland, MI

We had 40 knot winds for three days blowing water out of the bay - the keel was on the bottom. Then the water came back in, quickly rising four feet above normal. The **TideMinders** held the boat centered in her slip. Even at the lowest and highest levels, line tension remained steady. Their shock absorbing effect is great! Once we had a stern chock ripped out with a sudden lurch of the boat - this won't happen using **TideMinders**.

Chris Waln, Arlington, VA

TideMinders® are a One-time Investment

TideMinders® IN ACTION

Set 'em and forget 'em!

They are virtually INDESTRUCTIBLE, they FLOAT, and are GUARANTEED FOR 10 years

COMPLETE INSTRUCTIONS COME WITH EACH KIT!

This little “string of pearls” is remarkable!
It's the **TideMinders**® that are literally wrapped around the piling – not the line itself.
Your mooring line never touches the piling.

TOOLS ARE NOT REQUIRED FOR ASSEMBLY!

When you leave on a cruise, take the whole apparatus with you for use in the next marina.
Your dock neighbor will want a set for the “shared” piling.
The **TideMinders**® work beautifully together, without concern for who's on top!
